

Predictable delivery. Measured, not promised.

Probabilistic forecasting and flow metrics — running on your own infrastructure.

THE PROBLEM

Roadmap dates are promises made on gut feel. They break.

01

Single dates, hidden optimism bias

Confidence is explained verbally in the room, never actually measured.

02

Re-planning after every scope change

Spreadsheets and Gantt charts drift from reality within days.

03

Risk becomes visible too late

Decisions turn slow, contentious, and driven by whoever argues hardest.

WHAT LIGHTHOUSE SOLVES

It turns delivery data into trustworthy forecasts, instantly.

- ✓ Dates and risk drivers for initiatives and milestones
- ✓ Performance in flow metrics: throughput, cycle time, WIP
- ✓ Runs on-prem by default, no data leaves your environment
- ✓ Works with your existing Jira and Azure DevOps permissions

The core promise

**Your data
never leaves
your network.**

Self-hosted, open-source, MIT.

FORECASTING

Team and portfolio forecasts in one tool, one mental model.

Portfolio level

- Milestone dates with an explicit probability
- Respects backlog order and Feature WIP
- Bug inflow forecasting built in

Team level

- "How many by date" and "when for N items"
- Redesigned forecast, auto-runs as you type
- Backtesting validates accuracy vs. reality

Live team forecast in Lighthouse.

LEADING INDICATORS

See where to look in five seconds, before delays happen.

The Lighthouse metrics dashboard, fully customisable per team.

Predictability Score

How stable your throughput really is.

Load Balance Matrix

Control WIP without hard limits.

Process Behaviour Charts

Real signal vs. normal noise.

Arrivals & Work Item Age

Catch intake spikes and aging early.

MOMENTUM · SHIPPED IN THE LAST 90 DAYS

This is not a side-project. It ships every week.

Enterprise authentication

OIDC · SSO group-to-role mappings
Role-Based Access Control
API keys with scopes

A full AI automation surface

CLI · local + hosted MCP servers
Ask your forecasting data in English
Scoped, automatable access

Integrations and reach

Linear now generally available
Write-back of metrics to Jira / ADO
Standalone Windows / macOS / Linux apps

Deeper forecasting

Monte Carlo backtesting
Blackout periods for known freezes
Better defaults for greenfield items

WHY LIGHTHOUSE

Same Monte Carlo math. Your infrastructure. One tool, not two.

	Lighthouse	SaaS forecasting tools
Hosting	Your own infra	Vendor cloud
Licensing	Per organisation	Per seat
Scope	Team + portfolio	Team, or a 2nd tool
Source	Open, MIT	Closed
AI / automation	Full surface	None

We respect the category. Lighthouse extends the same probabilistic-forecasting foundation; it does not replace your existing workflow.

Enterprise-ready out of the box: self-hosted, MIT, CRA-compliant.

- ✓ Data stays in your network, no third-party cloud by default
- ✓ MIT open-source, you can read and audit every line
- ✓ CRA self-assessment, technical file, Declaration of Conformity
- ✓ PSIRT process and a published security-update policy
- ✓ OIDC, SSO and RBAC using your existing identity provider

Unusually strong compliance for a product at this price. When procurement asks, this is a strength, not a scramble.

OUTCOMES

Five outcomes leaders feel within a quarter.

- 01 Reliable forecasts grounded in real delivery data
- 02 Visibility into flow efficiency and performance
- 03 Early detection of risks and bottlenecks
- 04 Shared, data-based conversations instead of opinions
- 05 Measurable improvement in predictability and throughput

One product, three ways to buy — you pay for access to us, not for features.

Community

Free

Open-source · MIT · self-hosted

- ✓ Full forecasting + flow metrics
- ✓ Monte Carlo, Predictability Score
- ✓ Jira · Azure DevOps · Linear · CSV
- ✓ Your data never leaves your network

Up to 3 teams · 1 portfolio per instance

Self-Service

CHF 2,000

per year · per organisation

- ✓ Everything in Community, unlocked
- ✓ Unlimited teams · up to 50 instances
- ✓ RBAC/SSO · write-back · API keys
- ✓ Community Slack + best-effort help

The full product. Best-effort support.

PRIORITY SUPPORT

Enterprise

CHF 10,000

per year · per organisation

- ✓ Everything in Self-Service
- ✓ Prioritised handling · 24h ack
- ✓ A named contact for support
- ✓ 2x60-min onboarding · 90 days
- ✓ 10% off any workshop or training

Per organisation, not per seat. Existing customers offered one more year at the previous CHF 999 rate.

GET STARTED WITH SUPPORT

Two ways to start fast, both include a year of Lighthouse.

Bring Your Own Data Workshop

One day, built entirely around your real data.

- ✓ Lighthouse configured to your workflows
- ✓ Your historical data integrated and validated
- ✓ Immediate visibility into flow metrics
- ✓ Production-ready from day one

CHF 3,500 remote

CHF 4,500 on-site

Flow Clarity Assessment

A diagnostic of where unpredictability lives.

- ✓ Analysis of 3 to 6 months of history
- ✓ Flow constraints and bottlenecks named
- ✓ WIP distribution and aging trends
- ✓ 60-minute debrief with actionable insight

CHF 3,500

Both include a full year of Lighthouse Self-Service.

PROOF

Practitioners and customers already rely on it.

"If John Anderton designed a system for flow, this would be it. Very few tools distill what is going on in your system to act as mission control for everything delivery-related."

Nicholas Brown — Author of 'Real World Agility', consultant, speaker

"Lighthouse transformed how we approach delivery. It surfaces risk early and gives us a lean, cost-effective way to forecast and make better decisions."

Chris Graves — Focusrite

"Lighthouse helped us be more on to it. We are now more predictable, efficient and responsive when it comes to delivering value and serving our customers."

Gonzalo Mendez — Mitre 10

THE CREATORS

Built by the people who teach this for a living.

Benjamin Huser-Berta

Professional Kanban Trainer and software engineer. Builds Lighthouse, shipping weekly.

Peter Zylka-Greger

Delivery Coach and speaker on flow and forecasting. Owns positioning and delivery.

Why we built it

Existing tools were fragmented, expensive, and tied to the cloud. Pricing was unclear and features did not fit how organisations actually plan and deliver. So we built a simpler, data-driven, open one.
