LIGHTHOUSE

Predictable delivery. No Planning Theater

Because confidence should be measured, not declared.

Why Roadmaps fail today

1. Single dates with optimism bias; confidence explained verbally, not measured
2. Re-planning cycles after scope changes; spreadsheets drift from reality
3. Risk visibility is late; decisions are slow and contentious

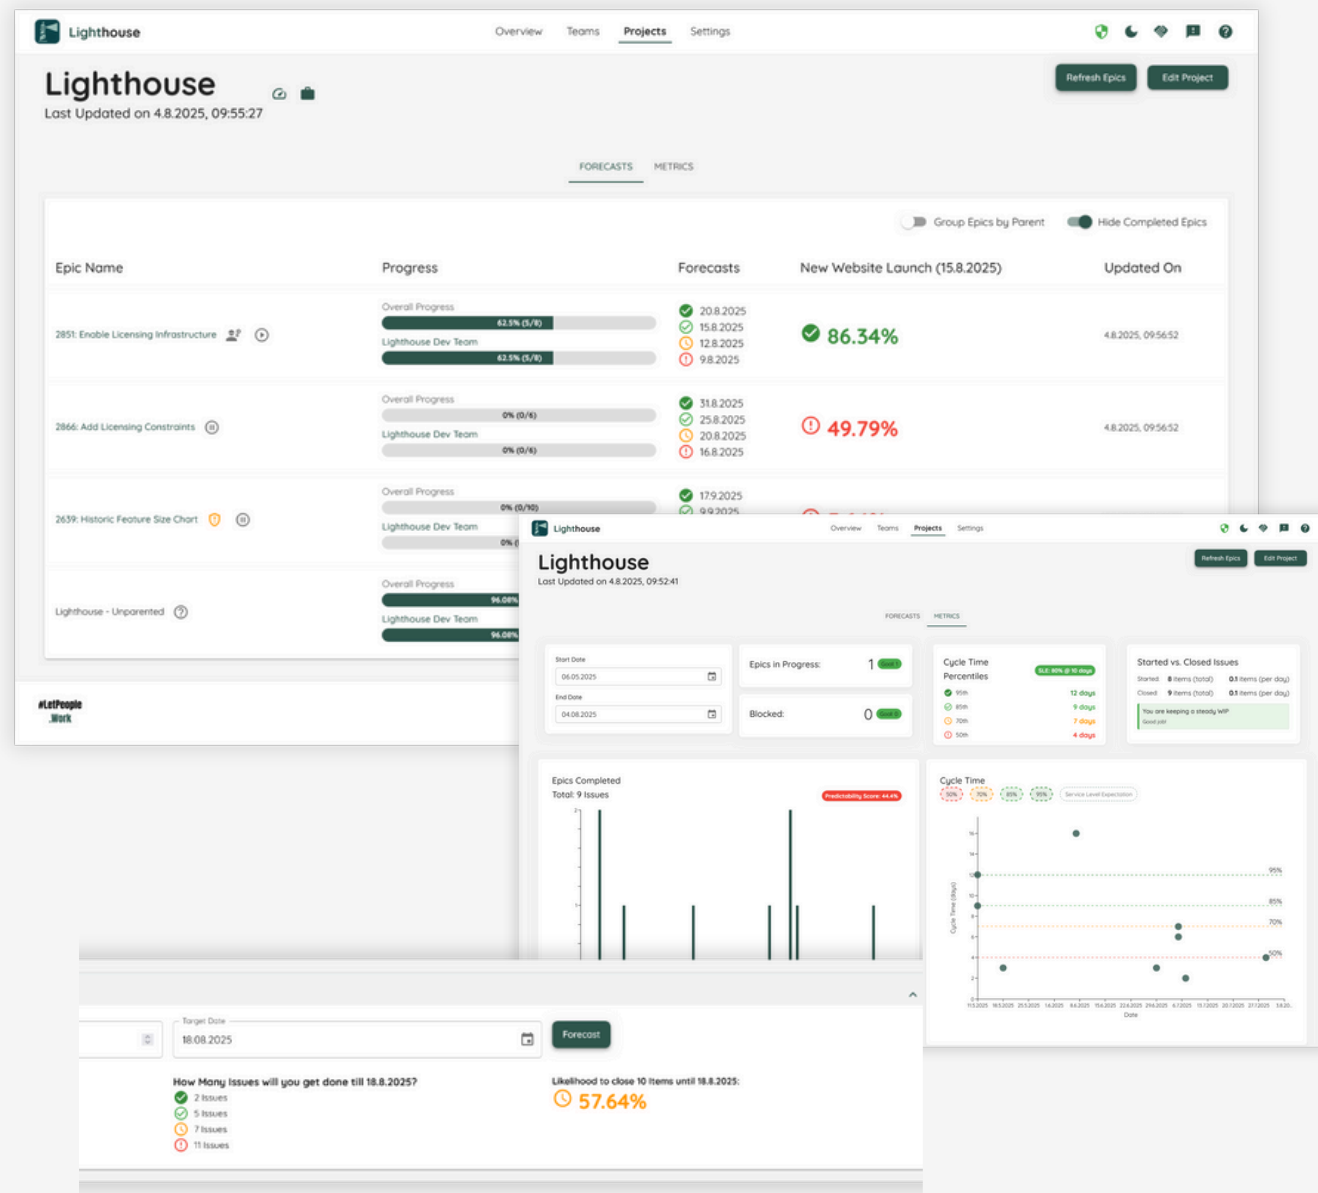

What Lighthouse solves

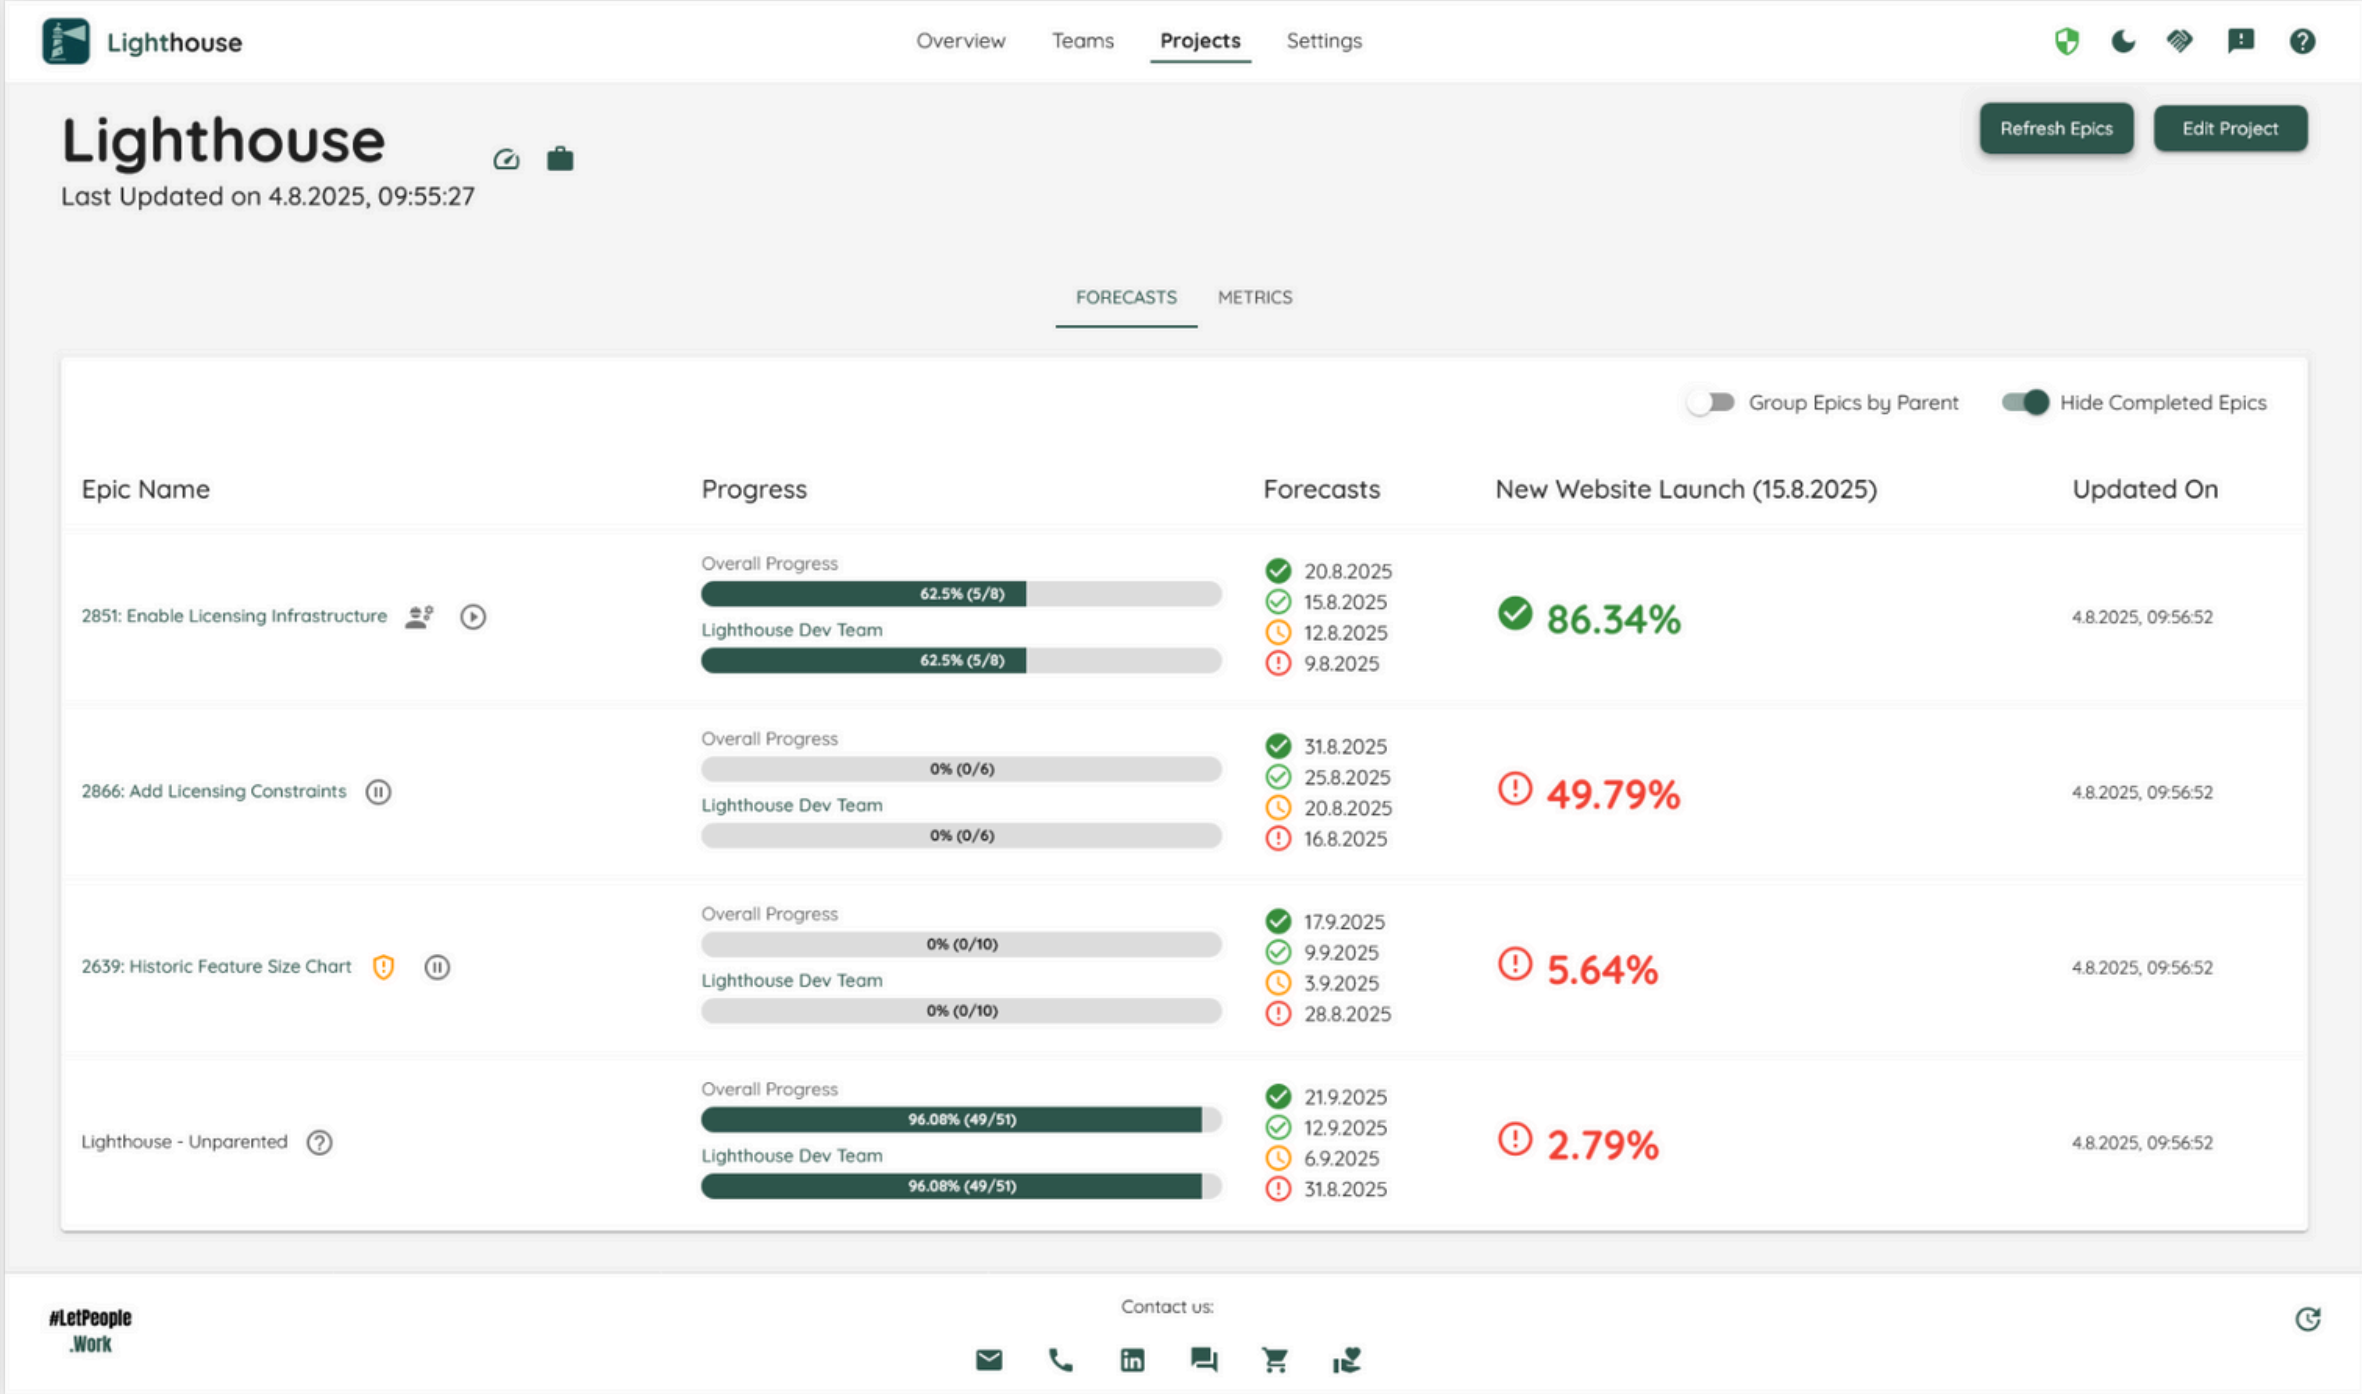

Lighthouse turns delivery data into trustworthy forecasts - instantly

- Shows dates and risk drivers for initiatives and milestones
- Not just forecasts — Lighthouse also measures performance via Flow Metrics.
- Runs on-prem by default — no data leaves your environment
- Works with existing Jira/Azure permissions; no cloud approvals required

Your data never leaves your environment.

What customers say

Gonzalo Mendez

"**Lighthouse** helped us be more on to it. We're now more predictable, efficient, and responsive when it comes to delivering value and serving our customers. It's made planning sessions run smoother and helped set clearer expectations with our stakeholders. The insights we get from the data really sharpen our conversations and keep us focused on what matters."

Chris Graves

"**Lighthouse** has transformed how we approach delivery. By prompting the right questions earlier and using the default feature size function to quickly forecast "how much?", it provides a lean, cost-effective way to surface risk and enable better decisions."

The Creators of Lighthouse

We're delivery and forecasting experts who built Lighthouse to solve the challenges organizations face every day.

Existing tools were fragmented, expensive, and tied to the cloud
Pricing was unclear, and features didn't fit how organizations actually plan and deliver

We combined theory and hands-on experience to create a simpler, data-driven solution

Today, Lighthouse is open, privacy-first, and built for organizations that value clarity, control, and measurable improvement
